

PROGNOSIS

Prognosis

Educational Prediction

Prognosis is an innovative breakthrough in the field of education, establishing itself as an essential predictive system for improving educational administration and strategy. Using data analysis and artificial intelligence, Prognosis not only predicts educational trends and patterns, but also provides crucial insights for improving the Basic Education Development Index (IDEB).

Project Goals

Our main goal is to transform the use of educational data by providing accurate predictions to combat school dropout, improve academic performance and optimize resource management. Prognosis also aims to help managers and educational policymakers reach and exceed IDEB targets, creating a more efficient and personalized educational environment.

BENEFITS

- Access to predictive analytics to improve strategic decisions.
- Customized solutions for unique educational challenges.
- Improved teaching quality and achievement of IDEB targets.
- Support in formulating effective and innovative educational policies.

Proposed Solution

Prognosis integrates an intuitive interface and a robust backend, combining Machine Learning and AI for advanced predictive analysis. We offer adaptable Business Intelligence dashboards, giving educational managers, from municipal schools to government agencies, easy access to relevant, real-time information.

Technology and Innovation

Hosted in a secure cloud, Prognosis ensures exceptional data availability and security. Its flexibility allows it to be implemented both in the cloud and locally, adapting to the needs of each partner institution.
